Aurum

The art of the junction.

CONFIDENTIAL

CASTELVECCHIO, VERONA, ITALY

Twenty years on one building. Every joint drawn by hand.

Carlo Scarpa spent two decades renovating Castelvecchio — a medieval fortress on the Adige — into one of the most precisely detailed buildings in the world. His obsession was the junction: the precise moment where old stone met new concrete, where bronze met travertine, where a medieval fresco was separated from a modern slab by a thin line of light. He was the son of a goldsmith. He drew every join individually. Nothing was specified once and repeated. The work was not about restoration. It was about revelation — making visible what had always been there but never been seen.

1964

THE TRANSLATION

"The junction is not the problem to be solved. It is the moment to be celebrated."

> Aurum does not copy Castelvecchio's medieval programme or its Venetian material palette. It inherits Scarpa's method: that the meeting point between materials is not a problem to be concealed but a moment to be designed, individually, with the care of a goldsmith. Every threshold, every material transition, every edge at Aurum has been resolved as a detail — not a general rule applied everywhere, but a specific answer to a specific question at a specific place.

01

The junction

Where two materials meet at Aurum, the meeting is shown — not concealed. A hairline shadow gap, a bronze reveal, a step in plane. Each junction is individually designed. None is a standard detail applied twice. The building's intelligence is concentrated at every edge.

02

Travertine skin

The primary exterior material is Roman travertine — quarried stone with a warmth that changes across the day. At dawn it is amber. At midday it is cream. At dusk it returns to its geological register: ochre, warm, mineral. It is not a finish. It is the structure's outer layer.

03

Bronze reveal

Window frames, door reveals, and pool edges in cast bronze — finished dark, not polished. Bronze ages in place: it deepens over years, not by neglect but by the specific chemistry of Hyderabad's air. In twenty years the patina will be irreproducible. This is a feature, not a failure.

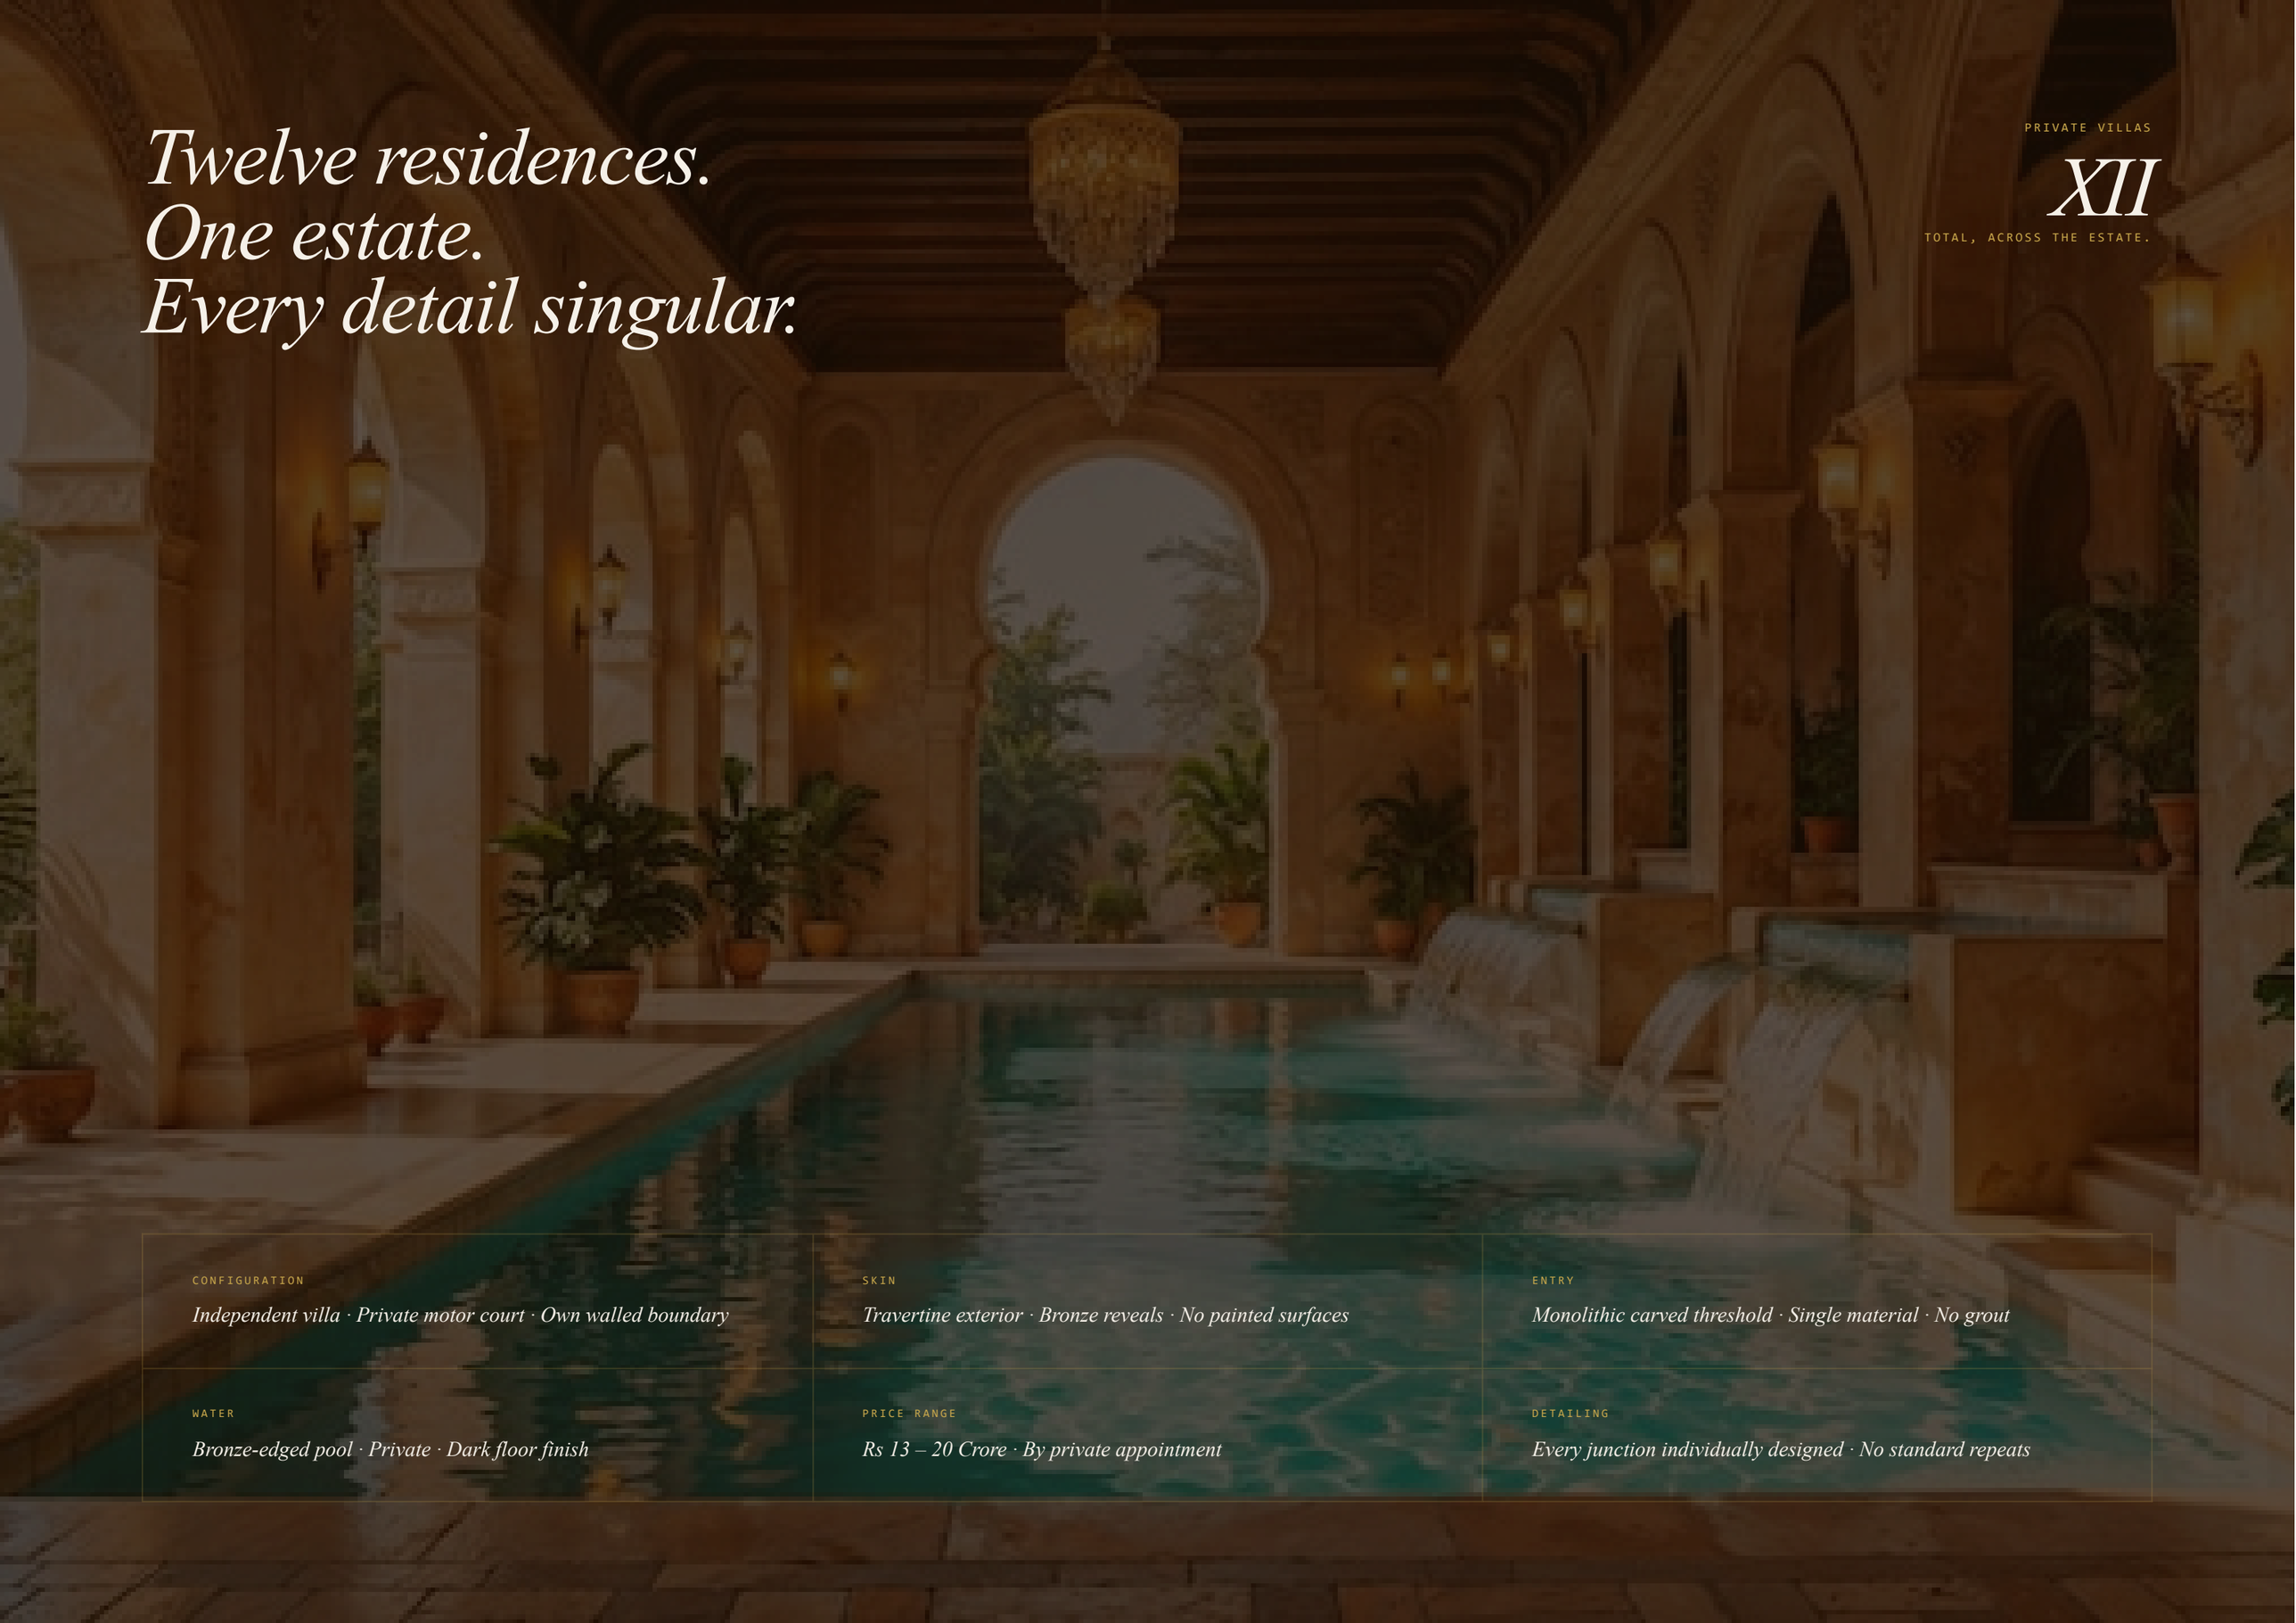
04

Carved threshold

The entry threshold at each villa is cut from a single piece of stone — not assembled. The floor plane meets the door plane meets the wall plane in a carved monolithic element. There is no grout line. No exposed fixing. The entry is the building's statement of intent, resolved before anything else.

"Every material earns its position by how it meets the one beside it."

Aurum's material logic follows Scarpa's: no surface is specified before its junction has been designed. The result is an architecture where looking closely is rewarded — where the more carefully you examine a detail, the more deliberate it reveals itself to be.



Twelve residences.
One estate.
Every detail singular.

PRIVATE VILLAS

XII

TOTAL, ACROSS THE ESTATE.

CONFIGURATION *Independent villa · Private motor court · Own walled boundary*	SKIN *Travertine exterior · Bronze reveals · No painted surfaces*	ENTRY *Monolithic carved threshold · Single material · No grout*
WATER *Bronze-edged pool · Private · Dark floor finish*	PRICE RANGE *Rs 13 – 20 Crore · By private appointment*	DETAILING *Every junction individually designed · No standard repeats*

THE SCARPA STANDARD

To see the joint is to see the truth.

Scarpa's father was a goldsmith. He grew up in a workshop where the quality of a piece was legible in the precision of where two metals met. He carried this into architecture: the question is never how to hide the join, it is how to make the join the finest thing in the room. Aurum is briefed on this principle entirely. Concealment is not a design decision — it is a failure of confidence. What Aurum shows, it shows completely.

Aurum is the place where this standard. The junction is not the problem to be solved. It is the building's most precise statement.

PRASHASHAN NAGAR · JUBILEE HILLS · HYDERABAD

An address that has already done its work for you.

10'
From HITEC City
by car

0
Through traffic.
The neighbourhood has none.

35+
Year old canopy.
Grown without instruction.

XII
Homes behind
one gate. No more.

Jubilee Hills accumulated its reputation the way travertine accumulates its patina — slowly, without announcement, through the simple passage of time and use. Prashashan Nagar is a particular pocket of it: old money, old canopy, no through traffic, no new construction that could threaten it. The families here stopped discussing the address because they have been here long enough that the address is simply true. Aurum is designed to belong to this register — the same inherited quiet, expressed through materials precise enough to be examined at close range.

THE DEVELOPER

SSquare Est. 1991

Thirty-five years building the commercial infrastructure of a city that never stopped growing. Over ten million square feet of premium commercial real estate in Hyderabad — privately held, privately financed, delivered without press releases. SSquare has never needed to market its standard. The buildings are the argument, and those who know Hyderabad know the argument well.

Aurum is their first and only residential project. The same precision that governs how a SSquare commercial building is delivered — every surface justified, every material decision traceable — applied, for the first time, to the question of where twelve families will actually live. This is not a pivot. It is a single, measured extension of thirty-five years of craft.

35
Years in Hyderabad commercial real estate

10M+
Sq ft delivered. Premium commercial.

01
Residential project. This is it. Their only one.
