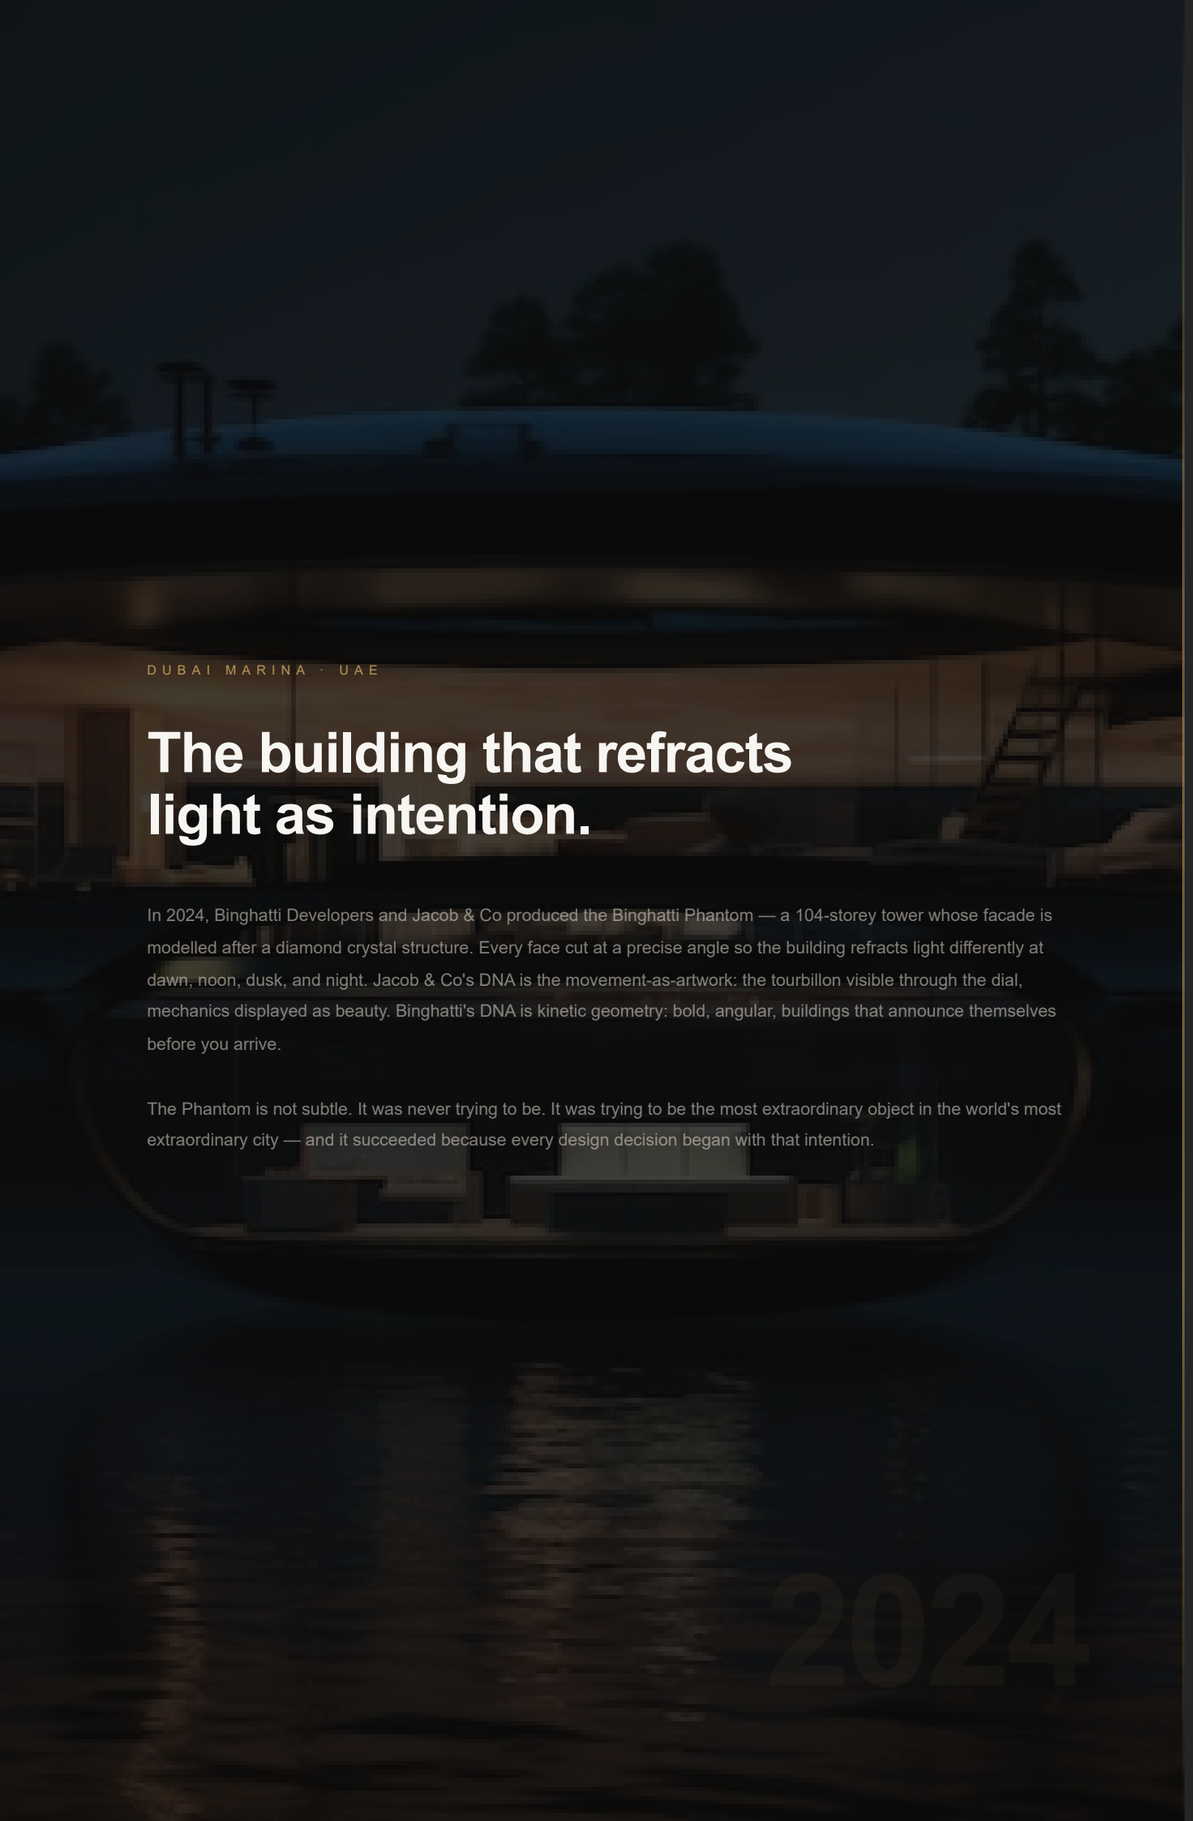
TWELVE PRIVATE VILLAS · JUBILEE HILLS, HYDERABAD

REVEL

Architecture as spectacle. Residency as arrival.

BY SSQUARE



DUBAI MARINA · UAE

The building that refracts light as intention.

In 2024, Binghatti Developers and Jacob & Co produced the Binghatti Phantom — a 104-storey tower whose facade is modelled after a diamond crystal structure. Every face cut at a precise angle so the building refracts light differently at dawn, noon, dusk, and night. Jacob & Co's DNA is the movement-as-artwork: the tourbillon visible through the dial, mechanics displayed as beauty. Binghatti's DNA is kinetic geometry: bold, angular, buildings that announce themselves before you arrive.

The Phantom is not subtle. It was never trying to be. It was trying to be the most extraordinary object in the world's most extraordinary city — and it succeeded because every design decision began with that intention.

2024

THE TRANSLATION

"A building should announce your arrival before you open the door."

> Revel in Jubilee Hills does not reproduce the Phantom's scale or its Dubai context. It takes its founding instinct: that architecture should be an event. That arriving home should feel like arriving somewhere. That a building which knows what it is communicates that immediately — in its facade geometry, its entrance sequence, its relationship to light. Revel is the only address in Hyderabad where the act of arriving is itself designed.

01

The Cut Facade

Every plane of the villa's exterior facade is angled. Not for decoration — for light capture. The geometry is calculated so that no two moments of day produce the same visual surface. At 7am the east face is pure illumination. By noon the upper planes divide into shadow and reflection. At dusk the bronze-toned cladding catches the hour like a dial registers a complication.

02

Refractive Glass

Glazing specified not for transparency alone but for its angular response to direct light. The Hyderabad sun is strong and specific — arriving early, departing late, at a low angle most of the year. Revel's glazing system responds to this: the glass moves the light around the interior rather than admitting it bluntly. The effect is a room that changes colour on its own schedule.

03

Bronze Reveal

Every window, every door frame, every architectural joint is finished in a warm bronze reveal — a fine line of metal that catches direct light and throws it back with a different temperature. The bronze does not dominate. It articulates. The building reads as monolithic at distance; at proximity it reveals the precision of its detailing. This is how Jacob & Co builds a watch. This is how Revel builds a wall.

04

The Arrival Axis

The motor court is not a driveway. It is a choreographed approach sequence: gate, forecourt, the building reveals itself at a calculated angle — never full-face until you are within it. You see the facade in stages, each a different cut of light. The path from gate to front door is a designed experience. Arrival here is not the beginning of being home. It is itself the event.

Each element of the Revel design system originates in the same logic as the Binghatti Phantom: that bold geometric intention, precisely executed, produces architecture that cannot be unseen — and therefore cannot be forgotten.

TWELVE VILLAS. ONE ARRIVAL EACH.

PRIVATE VILLAS

XII

BY APPOINTMENT ONLY.

CONFIGURATION Single-storey · Individual gate · Own plot	PRIVATE POOL Each villa · Not shared · Landscaped surround	ARCHITECTURE Angular facade · Bronze reveals · Cut glazing
ARRIVAL Designed approach axis · Motor court · Staged reveal	PRICE RANGE Rs 13 – 20 Crore · By appointment only	LIGHT SYSTEM Facade geometry calculated for Hyderabad sun angles

LIGHT AS ARCHITECTURE

THE BUILDING AS INSTRUMENT OF LIGHT.

Every angle of Revel's facade was calculated to respond to the Hyderabad morning light differently. The east-facing planes catch the early sun at a specific refraction angle. The bronze reveals redirect it. The cut glazing diffuses it. By 8am, the building is performing — and it does this every day, without instruction, because the geometry is fixed. This is not passive architecture. It is an instrument tuned to a specific sky.

THE DESIGN PRINCIPLE

Not where you live quietly — where you arrive with intention.

> Jacob & Co makes watches where the movement is visible through the dial because they believe the mechanism is itself beautiful. Binghatti designed a tower where the facade geometry changes its appearance through the day because they believe a building should perform. Revel applies this to residential architecture in Jubilee Hills: the villa does not sit passively at its address. It responds to the sky above it, to the position of the sun, to the angle of approach. Every morning it is slightly different. Every morning it is yours. This is not a residence. It is an object of precision in which you happen to live — and you will never mistake it for anything else.

PRASHASHAN NAGAR · JUBILEE HILLS · HYDERABAD

NOT THE NEIGHBOURHOOD'S QUIET INHERITANCE — ITS NEXT CHAPTER.

10'
From HITEC City
by car

0
Through traffic.
The neighbourhood has none.

35+
Year old canopy.
Unchanged, uncrowded.

XII
Villas behind
one gate. No more.

Jubilee Hills built its reputation slowly, over decades, through the cumulative presence of families who did not need to be elsewhere. Prashashan Nagar is its most settled pocket — the tree canopy arrived without being planted, the streets acquired their quietness without being enforced. It is everything Dubai's Marina is not: unhurried, rooted, already complete.

Revel does not try to match that register. It introduces a different note into the neighbourhood — precision, geometry, the forward-facing energy of a building that knows exactly what it is. Jubilee Hills has been many things. It has been old money, new confidence, and quiet inheritance. Revel is its next statement: that the address accommodates ambition as easily as it accommodates history. The twelve families who arrive here will not blend into the neighbourhood. They will add to it.

THE DEVELOPER

SSQUARE EST. 1991

Thirty-five years building the commercial infrastructure of a city that never stopped growing. Over ten million square feet of premium commercial real estate in Hyderabad — privately held, privately financed, delivered without announcement. SSquare has never needed to advertise its standard. Its buildings have always been the argument.

Revel is their first and only residential project. The same precision that built a commercial portfolio at scale applied, for the first time, to residential architecture of the highest order. SSquare did not enter the residential market to add units. They entered it to make one statement. The twelve families who live at Revel will live in a building that a 35-year institution built as its single residential act — and built, accordingly, to the fullest possible standard.

35
Years in Hyderabad commercial real estate

10M+
Sq ft delivered. Premium commercial.

01
Residential project. This is it. The only one.
