TWELVE PRIVATE VILLAS · JUBILEE HILLS

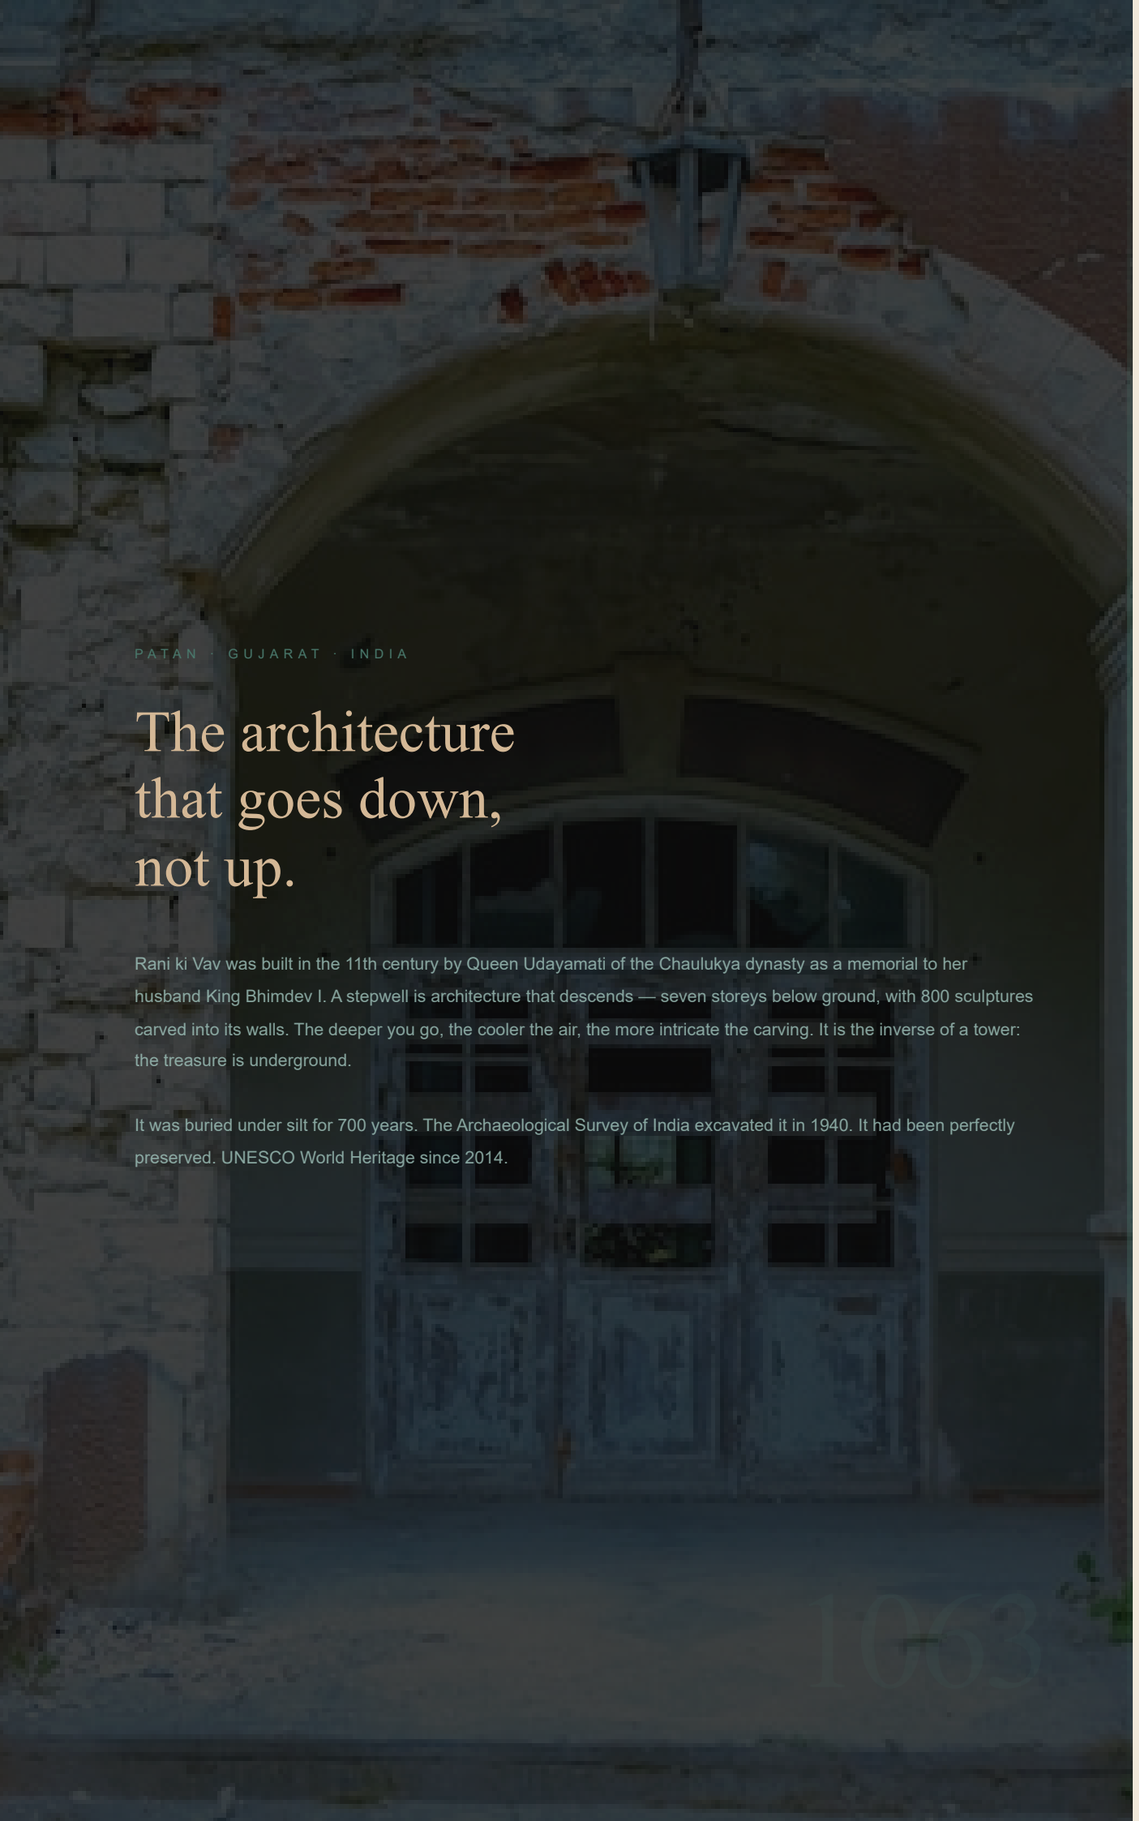
Silāj

To descend is to arrive.

Type
Gated Villa Estate

Count
XII

Location
Jubilee Hills, HYD



PATAN · GUJARAT · INDIA

The architecture that goes down, not up.

Rani ki Vav was built in the 11th century by Queen Udayamati of the Chaulukya dynasty as a memorial to her husband King Bhimdev I. A stepwell is architecture that descends — seven storeys below ground, with 800 sculptures carved into its walls. The deeper you go, the cooler the air, the more intricate the carving. It is the inverse of a tower: the treasure is underground.

It was buried under silt for 700 years. The Archaeological Survey of India excavated it in 1940. It had been perfectly preserved. UNESCO World Heritage since 2014.

THE TRANSLATION

"Luxury is not about height or visibility. It is about depth, interiority — the reward of going further in."

> Silāj does not reference Rani ki Vav in form — the scale and the brief are entirely different. It references the logic: that the most precious things are found by going deeper, not higher. The villas at Silāj are designed for interiority — courts that draw you in, spaces that reveal themselves gradually, materials that improve with time rather than announce themselves on arrival.

01

The descent corridor

The entry sequence at Silāj descends slightly below street level before rising into the court. This is deliberate. You leave the city behind. You go in before you go forward. The air changes. The temperature drops a degree. You have arrived before you have reached the door.

02

Carved stone panel

Interior walls in hand-finished sandstone — the same material family as the Gujarat stepwell that inspired the brand. Carved detailing not as ornamentation but as evidence of time invested. A wall that could only have been made slowly. Its surface changes in different light.

03

Subterranean cool

The Deccan basalt under Jubilee Hills is a natural temperature sink. Silāj's built form is designed to draw on this — thick walls, narrow openings at the upper levels, wider openings at grade and below. The architecture works with geology, not against it.

04

Still water below

The private pool sits in a lowered garden — not elevated, not visible from the street. You discover it by descending. The water is below the sightline until you are at the terrace. This is the stepwell logic: the best things are found by going in, not by looking from outside.

"To build for permanence, even when no one is watching."

Rani ki Vav was carved with 800 sculptures for the dead. No one expected it to be seen again. It was preserved by depth. Silāj is built on the same logic: thoroughness is not for display. It is a property of the material itself.

Twelve residences.
One estate.
The reward of depth.

PRIVATE VILLAS

XII

TOTAL, ACROSS THE ESTATE.

CONFIGURATION

Single-storey · Private gate · Each on own plot

WATER

Private pool, lowered garden setting · Not shared

ENTRY

Descent corridor · Grade transition at threshold

MATERIAL

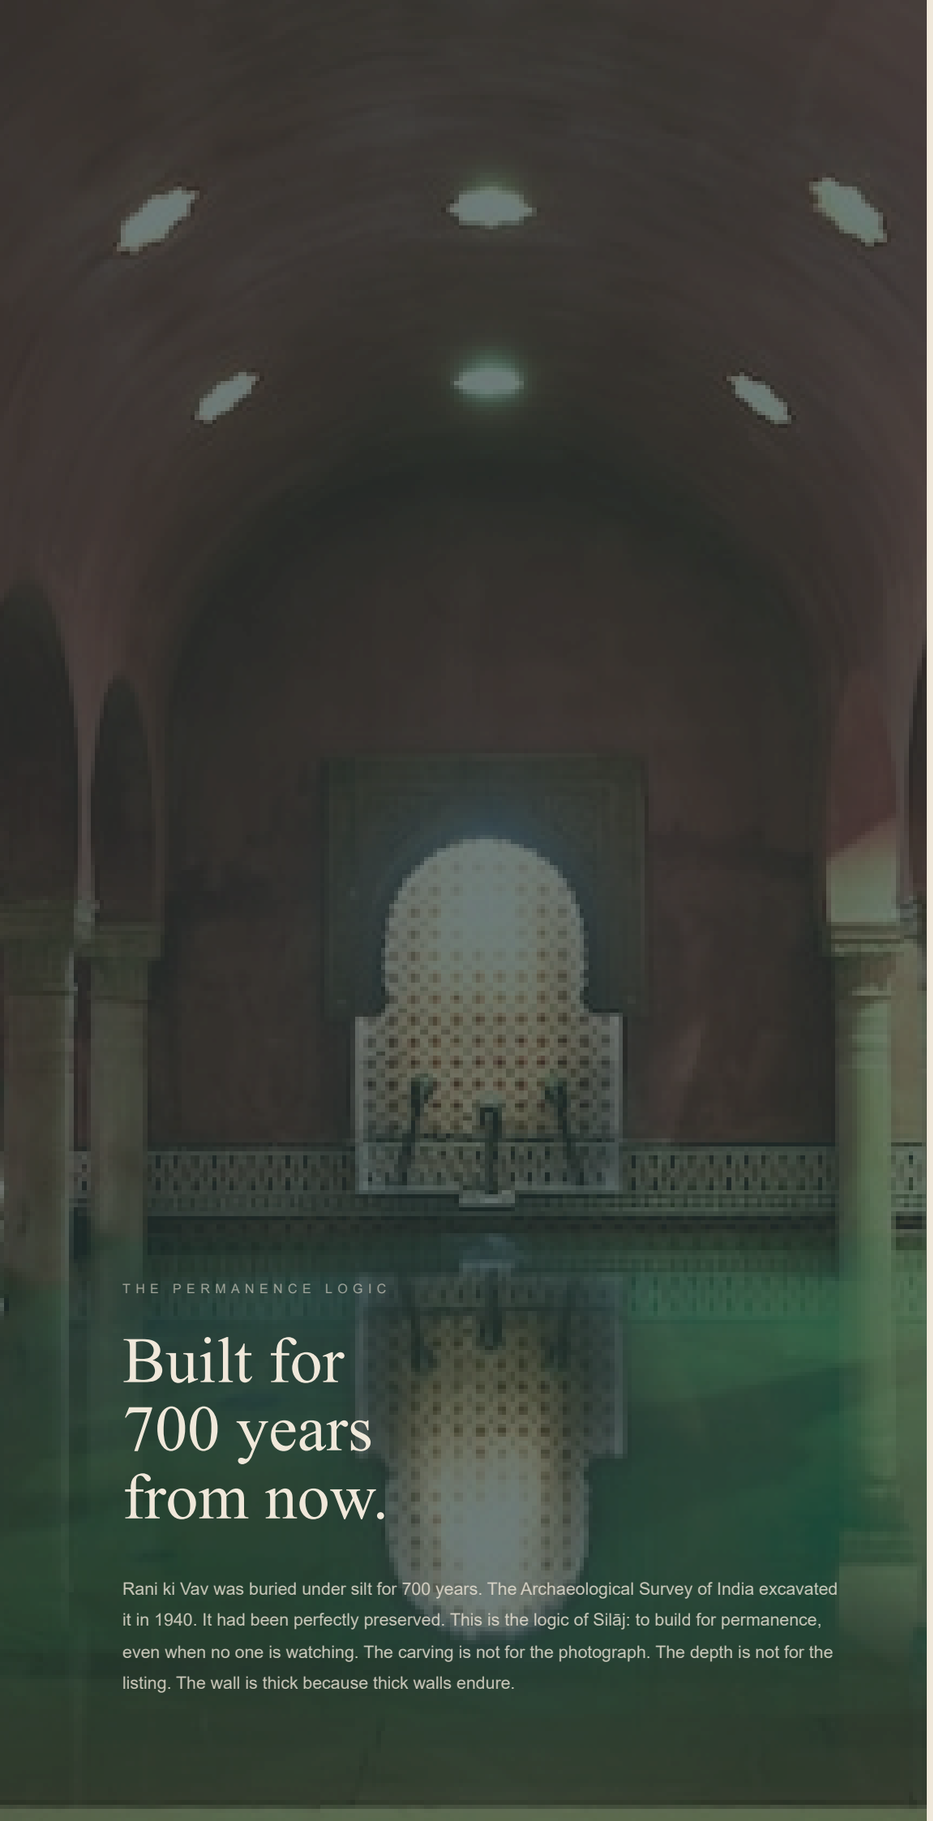
Sandstone interior · Hand-finished · Deep walls

PRICE RANGE

Rs 13 – 20 Crore · By private appointment

PERMANENCE

Designed to improve with time. Not for the moment.



THE PERMANENCE LOGIC

Built for 700 years from now.

Rani ki Vav was buried under silt for 700 years. The Archaeological Survey of India excavated it in 1940. It had been perfectly preserved. This is the logic of Silāj: to build for permanence, even when no one is watching. The carving is not for the photograph. The depth is not for the listing. The wall is thick because thick walls endure.

"

Rani ki Vav was buried under silt for 700 years. It had been perfectly preserved. This is the logic of Silāj: to build for permanence, even when no one is watching.

— The Silāj brief · Jubilee Hills, 2025

The stepwell was not built to be excavated. It was built because the work required it. The 800 sculptures are not in a museum — they are in the walls, seven storeys down, where the temperature is constant and the light is particular. Silāj asks the same question of every decision: does this need to be here? And then: will it still be right in fifty years?

Basalt under everything. The depth was always here.

10'
From HITEC City by car

0
Through traffic. The neighbourhood has none.

65M
Year old Deccan basalt beneath the address.

XII
Villas behind one gate. No more.

Jubilee Hills sits on the Deccan Plateau — one of the oldest geological formations in the world. The basalt under Prashashan Nagar is 65 million years old. It is a natural temperature regulator, a structural foundation of exceptional density, and a material argument for building for the long term. Silāj is not in conflict with this geology. It is an extension of it. The thick walls reference the depth below. The descent logic references what was always underground.

THE DEVELOPER

SSquare
Est. 1991

Thirty-five years building the commercial infrastructure of a city that never stopped growing. Over ten million square feet of premium commercial real estate in Hyderabad — privately held, privately financed, delivered without announcement. SSquare has never needed to advertise its standard. Its buildings have always been the argument.

Silāj is their first and only residential project. The same depth of specification, the same material rigour, the same insistence on permanence — applied, for the first time, to the place where twelve families will actually live.

35
Years in Hyderabad commercial real estate

10M+
Sq ft delivered. Premium commercial.

01
Residential project. This is it. It will be their only one.
